Solaglaze

The Naturalight Solaglaze is a modern sleek solution for flat glass rooflights, suitable for residential and commercial applications. Due to the frame being made from uPVC, the rooflight is resistant to all weather conditions and requires minimal maintenance.

This product is suitable for most commercial and residential applications where the increase of natural light is desired.

The Solaglaze product is generally installed to a builder's upstand suitable for flat or pitched roof's on a pitch between 5 and 60 degrees. Once in place, it's easily secured using the supplied colour co-ordinated angle brackets, which can be hidden behind the plasterboard.

On larger bespoke size's Naturalight offer an installation service, in this instance the framework is fixed directly to the upstand and glazed in situ.

Carrier Frame

Low-Level Maintainance
Available in Both Anthracite Grey or White
Multi-Chambered Thermally Efficient uPVC Frame
